

Thank you for applying to our Front End Developer position.

The goal of this task is to give us an idea of how you write code and learn others technologies.

Build a single page application (SPA) using BackboneJS. The application should have two pages. The first page will be a list of movies; the user can click on an item in the list and see the details of the selected movie in other page.

We want that you use all the features that backbone brings to you like models, collections, views, etc... A real MVC

You can use a fake REST API for the server part like this one:

<https://github.com/typicode/json-server>.

How to Submit:

- Zip your working folder with the name ``<your name>_petcoach_test``.
- Exclude `node_modules` folder from the zip and send us.
- Provide us the necessary documentation to run your project.
- If you're using github or any code management tools, just provide us the link!
